Evan John Tomy

519-503-9020 | evanjohntomyy@gmail.com | linkedin.com/Evan | github.com/Evan

Bachelor of Computer Science student with excellent leadership skills seeking a co-op from September to December 2025

Technical Skills

Programming:	C, C++, Python, JavaScript (ES6+); strong object-oriented and functional programming skills
Embedded Systems & Signal Processing:	Introductory knowledge of microcontroller programming, RTOS concepts, and digital signal processing (e.g., FFT, filtering)
Connectivity:	Hands-on with Bluetooth LE, Wi-Fi, and IoT communication protocols
Tools & Platforms:	Linux, Windows, Visual Studio, Git, GitHub, Wireshark, Arduino, Godot
Security & Testing:	Basic application security, vulnerability assessment, unit and integration testing using Pytest
Development Practices:	Agile methodology, CI/CD fundamentals, collaborative development using GitHub Actions

Professional Experience

Co-Founder / Executive Lead Sep 2023 – Present
ConHacks 2023 *Waterloo, ON*

- Co-founded and led the organization of Conestoga College's first ever yearly hackathon, attracting participants across multiple disciplines and fostering a collaborative tech community
- Spearheaded event planning, logistics, and sponsor outreach, successfully coordinating a full-day event with technical workshops, keynote speakers, and judging panels
- Collaborated with a team of peers to design and manage the event website, registration system, and promotional materials
- Demonstrated strong leadership and decision-making skills during high-pressure planning sessions and live event execution
- Promoted team dynamics and cross-functional collaboration through regular meetings, task delegation, and feedback loops
- Contributed to creating an inclusive and supportive environment for all attendees, mentors, and judges

Contract Data Engineer (Co-op) May 2025 – July 2025
Afynia Laboratories *Hamilton, ON*

- Built and optimized ETL pipelines to clean and transform PCR diagnostic data from Excel/CSV into a MySQL RDBMS
- Implemented QC checks using Python/pandas to flag undetermined Cq values, low confidence markers, and failed hemolysis • Used regex and fuzzy string matching (RapidFuzz) to unify inconsistent patient/sample IDs across multiple input formats
- Generated and maintained unique Afynia IDs for biospecimen traceability across patient visits
- Documented data workflows and created simple output templates to assist non-technical wet lab staff
- Collaborated cross-functionally with lab, bioinformatics, and research teams to maintain data integrity and consistency

System Intern (Co-op) Sept 2025 – Dec 2025
HTIC Global – Remote *Kochi, India*

- Supported the System Administration team by assisting with installation, configuration, and maintenance of hardware and software across the organization.
- Helped troubleshoot desktop, network, and system-related technical issues under the guidance of senior IT staff, improving uptime and resolving user issues efficiently.
- Participated in user account management tasks including account creation, permission updates, and access rights maintenance in accordance with internal security policies.
- Monitored system performance, identified irregularities, and escalated issues to ensure smooth IT operations and business continuity.
- Created clear, structured documentation for troubleshooting steps, system updates, and internal IT procedures.
- Collaborated with cross-functional teams and improved communication skills through daily check-ins, team meetings, and written technical reporting.

Projects

Fox Run | *Godot Engine, GDScript, Pixel Art, Game Design* Jan 2024 – Feb 2024

- Developed a 2D side-scrolling platformer game using Godot Engine as a solo college project, featuring an adventurous fox navigating diverse biomes
- Implemented interactive mechanics such as collectible cherries (gold), health-restoring gems, and enemy encounters with frogs, opossums, and eagles
- Designed dynamic environments with two thematic zones lush green forest and dark mysterious area to enhance player immersion
- Built UI elements to display health, gold, and gameplay status using GDScript for real-time updates
- Optimized sprite assets, level design, and collision systems for smooth performance using pixel art and tilemaps
- Published project on GitHub with open-source contribution guidelines for future enhancements

CamSentinel | Python, OpenCV, HTML, CSS, Arduino May 2023 - July 2023

- Developed a smart security camera system with real-time motion detection, face detection, and intruder alerts
- Integrated environmental sensors to display live temperature and pressure data alongside video feeds
- Combined hardware and software solutions to create a multifunctional security tool for home or office use.

House Price Predictor | *Python, scikit-learn, pandas, seaborn, NumPy* June 2025 – Present

- Developing a regression model to predict house prices using the popular Kaggle housing dataset
- Performed exploratory data analysis (EDA) and visualized correlations between features such as area, number of rooms, and location
- Engineered new features and handled missing values, outliers, and skewed distributions using pandas and NumPy
- Trained and tuned models including Linear Regression, Ridge, Lasso, and Gradient Boosting Regressor using cross-validation
- Currently working on deploying the model with a Flask API and an interactive web interface using HTML/CSS

Education

Bachelor of Computer Science (Honours) **Jan 2023- present**
Conestoga College *Waterloo, ON*
